

AqueenaPro

Aqua pura, vita longa

Just purified water **is healthy water**

zepter[®]
INTERNATIONAL
LIVE BETTER • LIVE LONGER

A high-speed, artistic photograph of a large splash of water against a white background. The water is captured in mid-air, forming a complex, sculptural shape with many smaller droplets and bubbles trailing behind the main splash. The lighting highlights the texture and movement of the water.

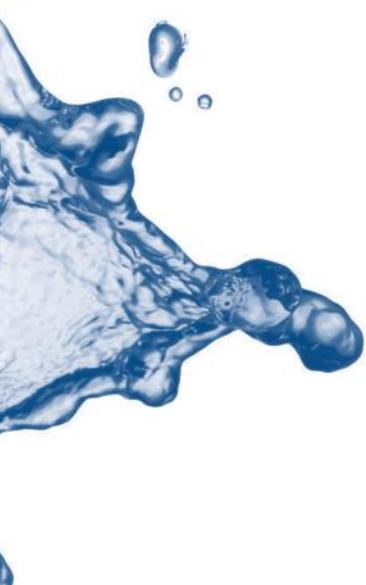

AqueenaPro
Aqua pura, vita longa

AqueenaPro - The ultimate source of clean, healthy water!

Water is the essence of life, but with the ongoing process of globalisation, the planet's water has been put into danger. It is not just its shortage that is creating the most concern, but the quality of the water, contaminated with numerous chemicals from different industries that is frightening.

Pure water is the world's first and foremost medicine. The intake of water on a regular basis is essential for many reasons. It is responsible for lubricating our joints, it acts as a shock absorber in the eyes and the spinal cord and aids in maintaining body temperature. Water also plays an important role in respiration, digestion, metabolism, and waste removal. Water is necessary to take nutrients into the cells and to flush waste from the cells.

Some of us do drink the right amount of water, but does this mean that we drink healthy water?

Is the **tap water** we drink safe? Mostly not

There are many “regulated” contaminants and even more unregulated toxins present in tap water. Tap water is often purified by adding disinfection solvents such as chloride and other chemicals which end up in our bodies, like arsenic, lead cadmium, fluoride or bacteria, yeasts and viruses. The “purified” tap water that reaches our homes is often full of iron compounds, because the water travels through old corroded underground pipes and all of that rust reaches the water we usually drink and use in the household.

The long exposure to such chemicals leads to skin damage, problems with the circulatory system, increased risk of getting cancer, kidney problems, high blood pressure and other serious health conditions.¹

Is the **bottled water** we drink safe? Probably not

The biggest concerns are the water bottles that contain BPA (Bisphenol A), which is a toxic chemical categorised as an endocrine disruptor, affecting the normal hormone levels in our body. Even if the material were not a cause of worry, the fact that this industry is not strictly regulated and not obliged to mention the water source on the labels, should be.

Some bottled water comes from pristine sources, but a huge percentage simply comes from the municipal supply. Why buy expensive bottled water and put your health at risk?

Is the **filtered water** we drink safe? Mostly yes

The market today offers a wide range of with filters that vary widely in quality, design, efficiency and price. Many systems, although pricey, lack the necessary certification, quality control or safety features. They are missing scientific data reports on water purifying efficiency, posing a real threat to our health and well-being.

Filtered water may well be the best, healthiest and cheapest solution if you find the right water filtering system.

Think twice before drinking another glass of water – **take the smart decision!**

Zepter's AqueenaPro is the right solution - Purified, clean, healthy water

AqueenaPro is a highly technologically advanced filtering system, designed around the most effective filtration process: **Reverse Osmosis**. Being equipped with a **5 stage filtration system**, it ensures maximal purification of the water, by effectively removing all dangerous contaminants making it pure and healthy to drink. Fully automatised and practical, it represents the best economical solution for your daily healthy water supply for home and office use.

Zepter International, known for its strict quality control standards, uses the latest technology and rigorous testing, as well as international certification to ensure the high level of safety and efficiency of AqueenaPro for positive health benefits.

Drinking clean water is very important for our health

Water is essential to all living organisms. The main component of the human body is water. The brain and heart are composed of 73% water, while the lungs are about 83% water. The skin contains 64% water, the muscles and kidneys are 79%, and even the bones are watery: 31%. ²

Water has the excellent ability to dissolve a multitude of substances, to deliver oxygen to the cells, to regulate body temperature, to help the metabolism process. Babies have a higher percentage of water in the body than adults, and in general the human body is 60% water. Each day we must consume a certain amount of water to survive - **so choose clean, healthy, drinking water, for a better life and everlasting happiness!**

Drinking enough clean water will:

Improve mental performance

The brain tissue is composed of **73% water, which is needed to manufacture hormones and neurotransmitters.**

Clinical tests have proven that drinking the right amount of pure water will improve memory performance and lengthen concentration span.³

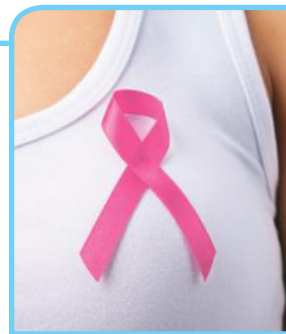

Help to prevent critical ailments

Water which is a naturally present element in our bodies, has the power to protect our health.

Conditions like heartburn, arthritis, back pain, migraines, colitis, asthma, high cholesterol and high blood pressure can be prevented and their risk can be suppressed by drinking enough pure, healthy water.

Prevention is everything - so be aware of the quality of your drinking water!⁴

Keep you in shape

Water is a proven appetite suppressant that will also speed up your metabolism without any calories.

Studies have shown that after drinking just **2 glasses of water**, it will take around **30 minutes** before your metabolism is kick-started into burning calories at a **30% faster rate!**⁵

Wash away cavities

Our saliva is 99% water and without it dental enamel would become demineralised and porous, bacteria would spread undisturbed and cause cavities due to the increased production of acids.

Water neutralises the acids, so drink enough pure water and keep your smile beautiful.

AqueenaPro's effective process to obtain purified clean water: 5 stage filtering system

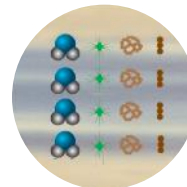

Stage 1: 5-micron PP filter

Effectively removes larger particles, like rust and sand, as well as other solid impurities from the water.

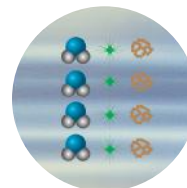

Stage 2: Pellet Carbon filter

Absorbs free chlorine, organic matter, odours, discolouration and other substances from the water.

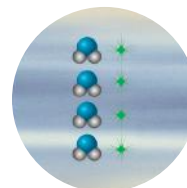

Stage 3: 1-micron PP filter

Filters particles of a smaller size, such as suspended solids and colloids.

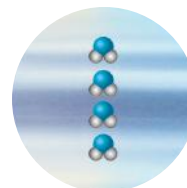

Stage 4: Reverse osmosis membrane

Removes bacteria, viruses, heavy metals, like lead, cadmium, mercury, pesticide residues 2,4,6-Trichlorophenol, nitrite compounds and other harmful substances.

Stage 5: Coconut post-filter

Improves odour and adjusts taste.

Health and safety - No compromise!

AqueenaPro, saves you **TIME, MONEY** and protects your **HEALTH!**

TIME:

Save 100% of your time on frequent shopping trips to buy bottled water.

MONEY:

Save 100% of your money - no more bottled water, inefficient filtration systems and no more high energy bills.

HEALTH:

Protect your health against **pollutants** such as bacteria, viruses, lead or heavy metals **and unhealthy plastic bottled water.**

Healthy clean water

whenever you need it

Improve health conditions

and the appearance of the body

Cook healthier meals

and enjoy better tasting coffee or tea

Smart display panel

for an easy and safe operating system

Make the **smart life investment**
and **increase your life performance!**

AqueenaPro's functional features

Hermetically sealed inbuilt water tank (9.5l)

Offers protection against secondary contamination, while the inbuilt water tank makes AqueenaPro a smart, space-saving water purifier. The 9.5l water tank reduces the time needed to reach the purification process point, making healthy drinking water available at any moment.

Smart display panel

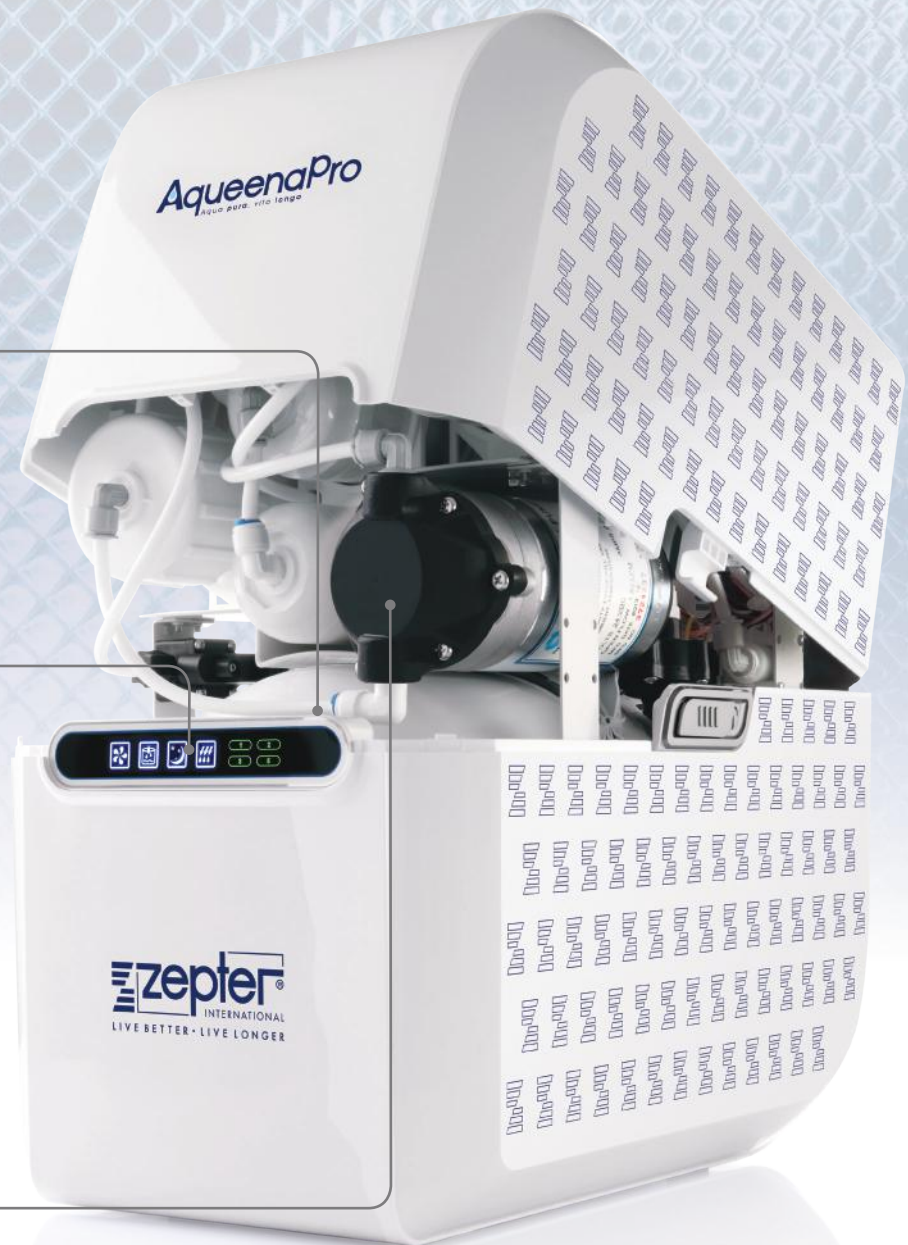

The Smart display panel shows AqueenaPro's working status while the computerised control box automatically regulates optimisation of energy and water consumption.

The Smart display shows the following functions:

- Working mode
- Water source and water inlet pressure
- Standby mode
- Flush mode
- Filter Status

High pressure pump

The high pressure water pump with combined water inlet solenoid valve, stabilises the environment for the reverse osmosis membrane, delivering up to date, leading efficiency in water purifying.

Safety features

• Leakage sensor

Detects any leakage that might occur, protecting and preventing possible flooding.

• Combined solenoid valve

Triggers the auto-flush process, that is responsible for maintaining the RO membrane in good condition.

• Water inlet solenoid valve

Controls inlet water pressure, ensuring a safe and smart operating process.

• One-way flow valve

Supports the high efficiency of the filtration process due to unidirectional flow in AqueenaPro.

Smart display panel

Water Source

The icon lights up and starts emitting an alarm when there is insufficient inlet water flow.

Working mode

Indicates that the water purification process is ongoing.

Standby mode

The filtration process is on hold, meaning the booster pump is inactive and the inbuilt water tank's maximal volume has been reached.

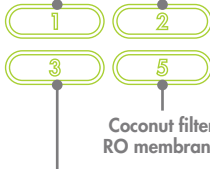

Flush mode

The icon lights up whenever the process of cleaning the RO membrane is ongoing, preventing the RO membrane from clogging.

5 - micron PP filter

Pellet carbon filter

Coconut filter
RO membrane

1 - micron PP filter

Filter Status Display

A sensor detects the filter conditions and changes the color codes when a new filter is needed.

The filter status display always shows the current condition of the filters:

Green light - the filter is working at its optimum

Orange light - the filter will soon need replacement

Red light - the filter needs immediate replacement and further use is not recommended.

AqueenaPro is part of **Zepter's** successful line of **water purifiers** for home or office use

Smart, space-saving design

AqueenaPro Professional Water Purifying System

Technical Information

Product name:	Zepter AqueenaPro
Model	WT-100
Voltage	AC100-240V, 50-60HZ
Power Rating	25W
Size (mm)	408wx265dx420h
Suitable Inlet Water Pressure	0.07-0.75MPa
Operating Pressure	0.6MPa-0.8MPa
Product Recovery Rate*	42%
Inlet Water Temperature	5-38°C
Maximum Inlet Water TDS Value	< 2000 PPM
Maximum Daily Water Production Volume	100 Gallons, approximately 378.5 Litres
Self-flushing system	YES
Electric Shock Protection Type	Type II
Tank Capacity	9.5 l (usable capacity 6 l) 2.5 Gallons (usable capacity 1.6G)
Suitable Water Quality	Primarily designed for municipal tap water.

*at 3.5 bar feed water pressure and 25° C feed water temperature;
measured in closed tank

AqueenaPro

Aqua pura, vita longa

Zepter International is a multi-branded multinational company that produces, sells and distributes exclusive, high-quality consumer goods around the world, principally through its own sales network as well as through high-end stores. Together with the Zepter Finance Holding AG, a financial, banking and insurance company, it forms part of the Zepter Group. Since its inception, Zepter International has established very high quality standards and has become an essential part of the lives of millions of people throughout the world. A new presentation of Zepter products starts every 10 seconds somewhere in the world, as Zepter is present on 5 continents in more than 60 countries. Zepter International owns 7 factories in Switzerland, Germany and Italy and over 320,000 m² of business space in the world's top locations.

The past 28 years have been very successful as over 80,000,000 people have become satisfied users of Zepter products. Zepter's vision, superior quality, innovative products and unique sales system with over 100,000 employees and consultants worldwide contribute to Zepter's success. Zepter takes pride in its superbly trained, highly motivated and inspired sales managers and consultants, on a global mission of health and beauty:

Live Healthy. Live Better. Live Longer
